

## 技術ノート KGTN 2020082103

### 現象

[ExPack] GGEasyMonitor (バージョン 3.1) の「セッション強制終了」機能とは？

### 説明

基本的にはADMINコンソールの (セッションの) Terminate 機能と同じです。操作手順は、セッション一覧画面の中から強制終了したいセッション名 (sessionName) を見つけ、その名称をクリックして下さい。

The screenshot displays the GGEasyMonitor web interface. At the top, the title "GGEasyMonitor" is centered. Below it, a section titled "[Session Summary]" contains a table with columns: Id, Host, Addr:Port, SessionNow, SessionMax, Usage, Last Updated, Available, and Enable. The table lists three sessions: #1 (vps-aps2), #3 (vps-aps3), and #2 (vps-aps1). A summary row shows "Total Sessions: 2" with a total of 160 sessions and 1% usage. Below the table, there are controls for "Session: Hide", "Refresh [10sec]: 5sec | 10sec | 30sec | Off", and "Logon: Enable". A search input field and a "User" button are also present. Below this, a section titled "[vps-aps1]" shows a detailed table with columns: Id, sessionName, userName, clientCount, clientName, clientAddr (local), and startTime. The first row shows session #13 with sessionName "administrator on vps-aps1", userName "administrator", clientCount 1, and startTime "2020-08-21 14:16:38". The sessionName cell is highlighted with a red border.

GGEasyMonitor								
[Session Summary]								
Id	Host	Addr:Port	SessionNow	SessionMax	Usage	Last Updated	Available	Enable
#1	vps-aps2		1	60	1%	2020-08-21 14:17:54	YES	YES
#3	vps-aps3		0	50	0%	2020-08-21 14:17:55	YES	YES
#2	vps-aps1		1	50	2%	2020-08-21 14:17:55	YES	YES
Total Sessions:			2	160	1%	singleLogon: No		

Session: Hide, Refresh [10sec]: 5sec | 10sec | 30sec | Off, Logon: Enable

User

[vps-aps1]						
Id	sessionName	userName	clientCount	clientName	clientAddr (local)	startTime
#13	administrator on vps-aps1	administrator	1	*	*	2020-08-21 14:16:38
