

## 技術ノート KGTN 2012072401

### 現象

[GGH4.0/Android] iPad/iPhone クライアントには自動ログオンの機能があるが、Android クライアントにはないのか？

### 説明

現在の Android クライアントには自動ログオン機能はありませんが、次のリリースでは自動ログオン機能が実装される見込みです。

Our developers feel this change request will be resolved by the following change. This new feature will be included in the next Android client release.

"Added the same autolaunch application settings as the current GG iOS client. This includes the Auto Connect feature which, when turned on, will automatically connect to the most recently connected host. To see these new features, start the Android client, then click the "Settings" icon at the top right of the host list screen. To turn off Auto Connect... start the Android client, Auto Connect will start to connect to the most recently connected host. You can either wait for the connection to be made and sign out of the host, or you can click the new "Cancel" button on the "Connecting" dlg, to stop the connection and go right back to the host list, where you can access the Settings icon"
